

APAC Tool Download Instructions

We will be using sftp¹ for the transfer of tools between teams. sftp accounts will be created that are jailed and only permit sftp. Interactive sessions will not be supported. The host is located in the Five Directions server room, and has an 80 Mbps symmetric link.

The following steps are required to transfer your files:

Prior to September 12th

1. If you already have a SSHv2 public key (2048 bits preferred), please send that key (id_rsa.pub typically) to apac@fivedirections.com along with your preferred username.
2. You'll receive a reply within 24 hrs from apac@fivedirections.com indicating that your account is ready along with detailed sftp instructions.

On September 12th

R&D Teams

1. Create a manifest of files to be transferred and the file's SHA256 hashes entitled CHECKSUMS. Entries in the file should look like those below.

```
724dfc83423559d1f29c2c0a3aa6fdbfc4a30440fbd7597007c6e876283083a6  Ubuntu_Server.tgz
36039592655e4214afc34dee40c540845e6995d6f1d7cc0d00200809ce906f5e  Example-src.tgz
```

2. Follow the sftp instructions in the email received above and transfer your file(s).
3. Send an email to [apac@fivedirections](mailto:apac@fivedirections.com) that ALL of your files are transferred.

¹ sftp is available on OSX, and most Linux distributions. For Windows, psftp found at <http://www.chiark.greenend.org.uk/~sgtatham/putty/download.html> is suggested.

4. Within 24 hrs, you'll receive a confirmation email that your files were transferred and the SHA256 hashes match (or they don't).

AC Teams

1. You'll receive emails when new files are ready for download.
2. Follow the specific sftp instructions in the email received.

Questions

Contact apac@fivedirections.com if you have any questions.
